-- Consulta 1:

```
SELECT nombre, género

FROM autores

WHERE país != 'Chile' OR país IS NULL;

ORDER BY nombre;
```

Explicación:

“SELECT nombre, género” selecciona las columnas “nombre” y “género”. Luego, “FROM autores” indica que la tabla la cual se va a emplear es la tabla autores. Además, “WHERE país != 'Chile' OR país IS NULL” impone una condición, en este caso está compuesta de dos partes unidas por un conector lógico “OR”. En la primera sección se verifica que los valores de las filas de la columna país sea diferentes de Chile. En la segunda sección se admite valores de países que sean nulos o vacíos. Finalmente, como están unidos por un “OR” eso quiere decir que los valores de “país” deben de ser diferentes de Chile o vacíos.

Agregado: “ORDER BY nombre” ordena la columna “nombre” por orden alfabético.

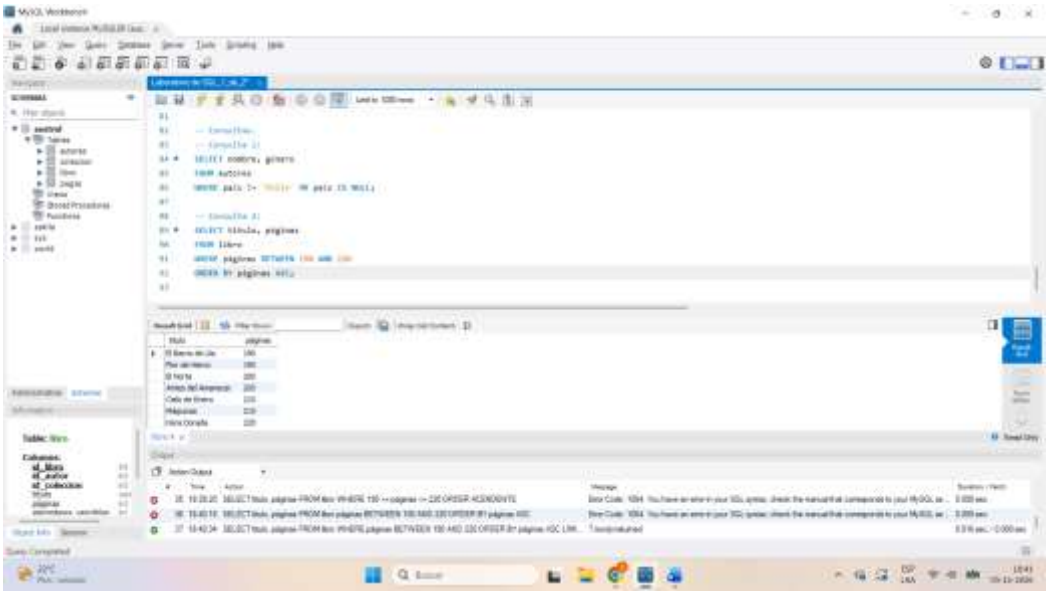

-- Consulta 2:

```
SELECT titulo, páginas

FROM libro

WHERE páginas BETWEEN 190 AND 220

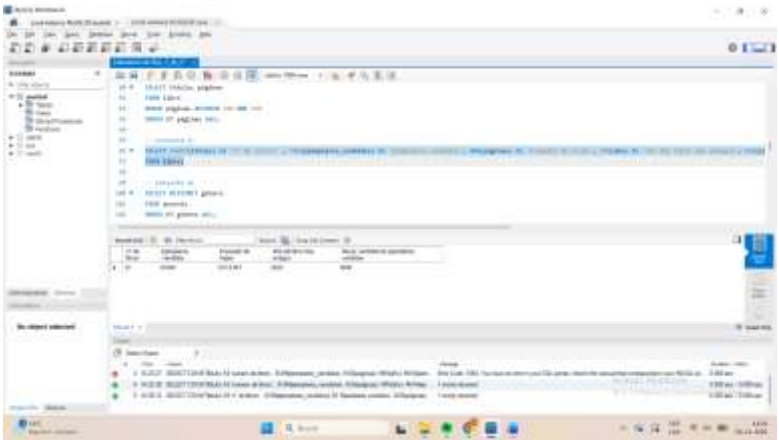

ORDER BY páginas ASC;
```

-- Consulta 3:

```
